total quantity of drug administered. Bilateral impair-

Trans. of Pchelovodstvo (USSR) 1956, v. 33, p. 19-24.

DESCRIPTORS: *Insects, Conditioned reflexes,
*Behavior.

Experiments have shown that the dance of bees, like any other unconditioned reflex (instinct) of an animal, can be controlled by conditioned reflexes, if the physiological mechanisms by which they proceed are known. By experimentally changing the behavior of individual worker bees, the flight activity of the entire colony can be changed, since it is known that a dancing bee mobilizes 8 to 10 times as many bees from the hive to go out to the plants as does a non-dancing bee.
